

15 Questions Every Parent Should Ask About Their Child's Screen Habits

A Practical Checklist for Healthy Technology,
AI & Screen Habits.

An evidence-based, age-appropriate checklist to help families and schools support healthy, confident, and responsible technology use — not by restricting freedom, but by building digital wisdom.

Prepared by Pankaj Rai
Founder & President, COMPUDON Junior

Based on published guidelines from AAP, WHO, APA, NCERT & NEP 2020

For Parents & Teachers: This checklist is a developmental guide, not a set of rules. Every child is different. Use it as a conversation starter, not a report card.

For Students: This exists because you matter. Technology is powerful, and so are you. The smartest digital citizens know how to use it on their own terms.

Grades 3–5 | Ages 8–10 | Explorers

Children at this stage are curious and trusting. They need guided exploration with clear guardrails.

? Layer 1: Developmental Readiness

Can your child do these things? If not, they may need more supervised access for now.

- ☐ Can explain, in simple words, why some websites and apps ask for their name, age, or school
- ☐ Understands that people online may not be who they say they are
- ☐ Comes to a trusted adult when something online makes them uncomfortable or scared
- ☐ Understands that anything shared online — photos, messages, videos — can stay online permanently
- ☐ Can follow time-based rules (e.g., "30 minutes of screen time") without repeated reminders
- ☐ Knows the difference between an advertisement and real content
- ☐ Can describe at least one example of unkind behaviour online and explain why it is wrong

✓ Layer 2: Healthy Use Guidelines

Practical habits that build digital confidence without over-dependence.

- ☐ Screen time: Limit recreational screen time to 1–2 hours/day (AAP). Homework is separate.
- ☐ Device location: All devices used in common family areas — not in bedrooms after bedtime.
- ☐ Co-viewing: Watch, play, and explore together. Ask what they enjoyed. This builds trust.
- ☐ No personal social media accounts. All major platforms require users to be 13+.
- ☐ Parental controls active on all devices. Explain why: "These keep you safe, like a seatbelt."
- ☐ Passwords are private. Never share passwords with friends — only with parents.
- ☐ Balance screen time with physical activity, reading, creative play, and family time daily.
- ☐ No devices during meals — this applies to adults too. Children learn from what they see.

🤖 AI Tools (ChatGPT, Copilot, Gemini, Claude, etc.)

- ☐ AI tools should only be used with adult supervision at this age
- ☐ Teach children that AI can be wrong — it is a tool, not a teacher
- ☐ Never enter personal information (name, school, address) into any AI tool
- ☐ Use AI as a learning companion: "Let's ask together and check if it's right"

⚠️ Layer 3: Red Flag Indicators

If you observe these patterns consistently, it may be time for a conversation — not a punishment.

- ☐ Becomes unusually anxious, angry, or tearful when a device is taken away
- ☐ Hides the screen or quickly switches apps when an adult walks by
- ☐ Sleep disruption — difficulty falling asleep, waking at night, tiredness linked to screen use
- ☐ Noticeable loss of interest in activities they previously enjoyed
- ☐ Talks about online "friends" or contacts that parents have never met
- ☐ Sudden, unexplained changes in mood or behaviour after using a device
- ☐ Reluctance or refusal to talk about what they do online
- ☐ Declining academic performance or loss of concentration in class

→ If you notice red flags, start with curiosity, not confrontation. "I've noticed you seem upset after using the tablet — can you help me understand?" works better than "What were you doing on that thing?"

Grades 6–9 | Ages 11–14 | Champions

Children at this stage seek autonomy, peer validation, and identity. They need more independence — with structure, conversations, and adult presence.

? Layer 1: Developmental Readiness

Before expanding digital independence, check whether your child can demonstrate these capabilities.

- ☐ Can critically evaluate online information — distinguishes between fact, opinion, and misinformation
- ☐ Understands the concept of a digital footprint — that today's post can affect tomorrow's opportunity
- ☐ Can resist peer pressure online: choosing not to forward a message, not joining a pile-on
- ☐ Understands consent in the digital context — does not share others' photos or info without permission
- ☐ Can recognise manipulation techniques: clickbait, phishing, emotional triggers
- ☐ Is willing to manage their own privacy settings — and understands why each setting matters
- ☐ Can explain what cyberbullying looks like and what to do if they experience or witness it
- ☐ Understands that free apps and games often profit from user data

✓ Layer 2: Healthy Use Guidelines

At this age, collaboration works better than control. Build the plan together.

- ☐ Create a family media plan together. When teens co-author the rules, they follow them.
- ☐ Screen time: Focus on balance — ensure tech doesn't crowd out sleep (8–10 hrs), activity (60 min/day), homework.
- ☐ No devices in bedrooms after bedtime. A family charging station eliminates late-night scrolling.
- ☐ Digital footprint conversations: Search your child's name together. "Would a future employer see this?"
- ☐ Gaming boundaries: Discuss in-app purchases before they happen. Review multiplayer chat settings.
- ☐ Teach reporting and blocking. Every platform has these tools. Using them is essential.

📱 Social Media: The Recommendation & The Reality

The recommendation: AAP, APA, and most platform ToS set 13 as the minimum. Many experts recommend 15–16.

The reality: Many children are already on social media. If yours is — guide more, restrict less:

- ☐ Review privacy settings together — set profiles to private, disable location sharing
- ☐ Periodically review follower/following lists: "Do you actually know all these people?"
- ☐ Discuss what they share and why — build judgment, not just rules
- ☐ Talk about the difference between online validation (likes) and real-world self-worth

🤖 AI Tools (ChatGPT, Gemini, Claude, Copilot, etc.)

AI tools are part of the landscape. Banning them won't work. Teaching smart use will.

- ☐ AI is a tool, not an authority. Verify answers against trusted sources.
- ☐ Academic integrity matters. Submitting AI work as your own is dishonest.
- ☐ Never share personal or sensitive information with any AI tool.
- ☐ AI-generated content is everywhere: deepfakes, synthetic images, cloned voices are real.

⚠️ Layer 3: Red Flag Indicators

Adolescence is naturally turbulent — but these patterns warrant a calm, caring conversation.

- | | |
|---|---|
| ☐ Secretive — password changes, clearing history | ☐ Multiple or hidden social media accounts |
| ☐ Dramatic mood shifts after phone use | ☐ Excessive app/game spending |
| ☐ Chronic sleep deprivation from late-night use | ☐ Sharing info/photos with people never met |
| ☐ Declining grades or withdrawal from activities | ☐ Withdrawal from family and friendships |
| ☐ Signs of cyberbullying (target or participant) | ☐ Mentions of self-harm, dares, or secret contacts |

→ **For teens especially:** Your goal is to be the person they come to — not the person they hide from. Stay calm, avoid "I told you so," and focus on solutions. A single trusted adult can change the outcome.
