

COMPUDON Junior (Season VII)

(Grades 6 & Above)

By the time students reach Grade 6, they are managing social media accounts, encountering content generated by AI every day, forming opinions shaped by algorithms, and navigating online spaces with real consequences in academic, social, and personal lives.

COMPUDON Junior for Grades 6 and above equips students with the skills they actually need: how to stay safe online, how to think critically about what they see, how to recognize manipulation and misinformation, and how to use AI tools responsibly and honestly.

These are not optional extras. They are the literacy skills of the digital age. And the best time to learn them is before a real mistake makes them unforgettable.

*Framework Inspirations

- UNESCO Media and Information Literacy Framework*
- UNICEF Child Online Protection Guidance*
- OECD Learning Compass and related learning recommendations*
- Microsoft AI and cybersecurity learning pathways*

COMPUDON Junior is a program of CyberLearning. CyberLearning is a Global Training Partner of Microsoft.

Exam Objectives

Digital Safety and Responsible Online Participation

I. Managing Unsafe and Harmful Online Interactions

- Recognize and respond appropriately to online harassment, bullying, and unwanted contact
- Understand the risks of unsafe online interactions, including exploitation, grooming, and exposure to harmful content
- Apply practical strategies to protect personal safety and wellbeing in online environments
- Know when and how to report unsafe situations to a trusted adult or platform

II. Evaluating Digital Content and Resisting Manipulation

- Spot manipulative design in apps, games, platforms, and commercial content
- Apply critical thinking to assess whether information online is misleading, harmful, or age-inappropriate
- Recognize how platforms use psychological techniques to keep users engaged & shape decisions

III. Protecting Privacy and Digital Identity

- Understand what personal information is and why protecting it online matters
- Manage a digital footprint responsibly and make informed choices about what to share and with whom
- Recognize how online behavior today can affect academic, professional, and personal opportunities in the future

Exam Objectives (Season VII)- Grades VI & above

Critical Thinking, Creativity, and Learning Strategies

IV. Using Creativity to Support Learning

- Apply creative thinking to explore concepts and solve problems
- Try new approaches rather than relying on the same methods
- Build confidence in thinking differently and producing original ideas

V. Designing Effective Learning Strategies

- Organize ideas to understand and remember them better
- Use pictures, diagrams, and creative formats to retain learning
- Build personal strategies that work across subjects

VI. Growing Problem-Solving Skills

- Break down complex problems using structured thinking
- Try different strategies, reflect, and improve
- Build self-awareness of how they learn best

VII. Spotting False or Misleading Information

- Spot disinformation — exaggerated headlines, manipulated images, false statistics
- Quickly check whether a source or content is credible
- Recognize manipulated or deceptive content

VIII. Understanding How Online Information Can Influence Us

- Recognize how emotions and biases affect decisions
- Spot online tricks, clickbait, and misleading messages
- Understand how biases influence decision-making

AI Literacy and Responsible Technology Use

IX. Understanding AI and Its Limitations

- Understand what AI is & identify the different types of AI tools encountered in everyday life
- Recognize what AI can and cannot do, including why it sometimes gets things wrong
- Understand the risks of trusting AI outputs without checking them critically

X. How Information Helps AI

- Learn how data is collected, organized, and used to train AI systems
- Understand how the quality of information given to an AI directly affects the quality of its answers
- Explore how wrong, unclear, or biased data can lead AI to produce incorrect or harmful outputs

XI. Using AI Tools Safely and Wisely

- Use AI safely and responsibly
- Ask better questions, evaluate responses critically
- Know honest AI use versus cheating
- Recognize privacy and safety risks

XII. Using AI in Safe and Responsible Ways

- Understand ethical principles guiding AI development and use
- Explore how AI affects fairness, privacy, and society
- Behave responsibly and honestly while using technology
